NOTE

1. All parameters NOT specially mentioned are measured at 230VAC input, rate load and 25 of ambient temperature.
2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor.
3. Tolerance : includes set up tolerance, line regulation and load regulation.
4. The power supply is considered a component which will be installed into final equipment. The final equipment must be re-confirmed that it still meets. EMC directives. For guidance on how to perform these EMC tests, please refer "EMI testing of component power supplies".
5. Length of set up time is measured at first cold start. Turning ON/OFF the power supply may lead to increase of the set up time.
