Sockets

WERNER'S 70-75 series sockets are the widest range of relay sockets. They are designed, manufactured and tested to meet the most demanding worldwide standard industrial requirements, our general purpose sockets offer reliable design, compact quick replacements, panel space saving and cost effective solutions.

Features Overview

- Sockets with built in Diodes
- Sockets with 10 amps contact ratings
- Sockets with dielectric strength 2000V
- Options from single pole up to four poles

Highlights

- Suitable for Din rail and PC board mounting
- Sockets with screw type & plug in type termination
- Werner sockets can accommodate all makes of relays

Werner sockets are designed for matching or mounting any make of standard relays and will perform for heavy-duty applications, large loads, long life and safety circuits. Werner has pioneered the popular and much copied DIN rail, snap-mount sockets today. Werner supplies sockets for many other relay manufacturers, and has done so far a long time.

The series include screw type wire connection, plug in type wire connection, PCB connection which are mountable on DIN rail, direct to panel and on board. If you are not certain you are getting the world's best-selling, highest-quality sockets available, it's time you plugged into Werner Sockets.

Wiring Instructions

1. Insert an applicable screwdriver into the square shaped port until the screwdriver tip touches the bottom of the spring, as shown below.

2. The wire port is now open and the screwdriver is auto-held in place. You can release your hand for comfort.

3. Insert the wire into the round-shaped wire port. Which can accommodate only one wire for each port. In case of connecting two wires to one terminal, use the adjoining port of the same terminal.

4. Pull out the screwdriver to complete the process.

Precautions

1. Do not rotate the Screwdriver while inserting into the port

2. Do not bend the screwdriver toward left or right after inserting the screwdriver into the port,
